

Workstream ProcessRepository (WPR)

The Workstream ProcessRepository (WPR) consolidates all your processes into one accessible location. It allows you to capture, dynamically alter and improve processes wherever you choose. WPR enables effective business process management throughout your organization.

Centralize & Dynamically Change Processes Integrating Business and IT Initiatives

Are you struggling to manage the performance of your business processes? Are you working to encourage cross-department collaboration? Do you need to improve transparency and controls in your processes? Are you looking for a solution that provides increased standardization, efficiency and consistency in your organization?

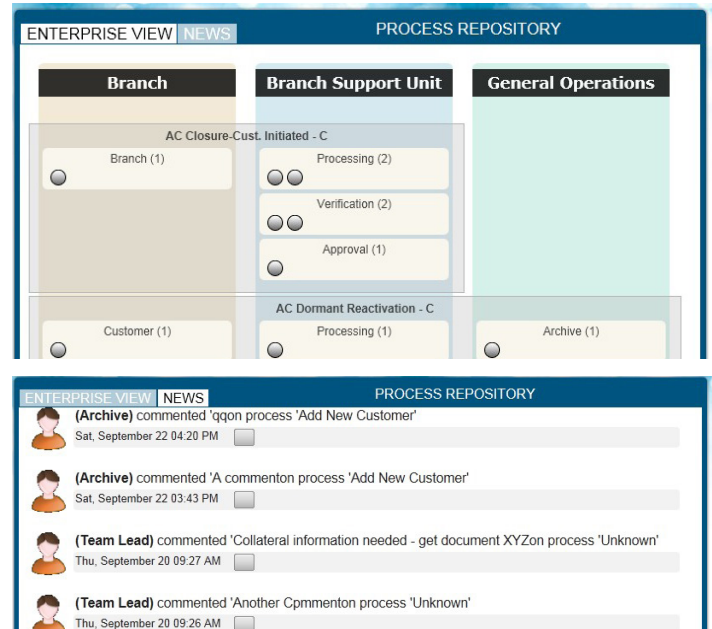

WHY USE THE WORKSTREAM PROCESSEPOSITORY

The Workstream ProcessRepository allows users to create, modify, search and add to the knowledge base of business processes on a central server. Benefits include:

- Ease of Process Capture**
Processes are captured in an easy to understand flow chart format, based on the BPMN (Business Process Management Notation) standard.
- Policies and Procedures**
The process repository allows users across an organization to document policies and procedures based on the process diagrams. Process diagrams can be linked to detailed policy and procedure descriptions.
- Online Resource**
Processes are keyword searchable. FAQs can be added to process diagrams to aid understanding.
- Real-time Collaboration**
Business users across multiple departments work collaboratively to define and improve a single process. While a process is being defined by business people and technologists, questions and answers are captured and clarifications issued. This creates a stored dialogue for future references.
- Risk Management**
WPR improves your operational risk management. Each process is documented and stored as a process map. Risk professionals can identify and mark risk points on the process map. Remediation can be identified, implemented and documented.

HOW DOES IT WORK?

- All processes are placed in a central web-based location, where processes can be viewed and edited by anyone with a web browser and the right access level.
- WPR maintains version control and graphically displays process changes, allowing administrators to review and approve. The process designer supports common features such as snap to grid, auto routing, and cut and paste.
- Process documentation is integrated in the repository. The Help window allows FAQs to be consolidated, and Word, PDF etc. documents can be uploaded and attached as links.
- The Workstream ProcessRepository does not require the installation of any client side application or plugin and supports most common browsers, including IE, Firefox, Chrome and Safari. Authentication and role assignment can be done using your local Active Directory system.

INTEGRATION & COMPATIBILITY:

The Workstream Product Suite supports multiple databases such as Oracle, MS SQL Server, DB2, Post GRESQL, Sybase, SAP and others. Workstream products also works with data collected through Web, Terminals, HTML (Web Applications) and connectors that support Java, .NET, C, C++.

ABOUT WORKSTREAM AUTOMATION

Workstream was founded in 2003 by a team of experienced IT and business professionals to deliver business process software tools and methodologies that help clients analyze, improve and implement changes to how they work. We enable clients to quickly optimize their business processes and realize a rapid gain in targets.

Workstream has assembled a team with a wealth of experience in business process modeling, automation and process improvement, backed by domain expertise in related industries. We understand our clients' needs because we've been there; successfully delivering major process improvement and IT projects on time and to budget, time after time.

WORKSTREAM SERVICES

Workstream can help you automate your business processes with our dedicated, highly skilled consultants. Our consultants work with you to:

- Analyze your business processes
- Optimize & Monitor processes
- Automate processes
